It currently consists of 20 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence this soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sapiens (human)

ORIGIN
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the corresponding to the overlapping clone, as we submit sequence submission with sequence was finished as follows unless otherwise noted: all sol); an attempt was made to resolve all sequenced with a alternate as compression and repeats; all regions were either double-stranded or sequenced with an alternate as compressions and repeats; all regions were covered by high quality deal sequencing problems, such assembly was confirmed by restriction of the cover do the rare plasmid subclone or more than one M13 subclone; and the occasion of the clone being a yAC.

numbers given in the feature table with their source databases:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

Vector DNA was prepared from a derivative inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and adaptors complementary to the insert adaptors and adaptored vector DNA, and transformed into chemically-competent E. coli XIIO-Gold (Stratagene) cells and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA polymuleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The ligated to the blunt ends in high molar excess. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     quality sequence stop: 684
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (http://www.jax.org/resources/documents/dnares/). The DNA (http://www.jax.org/resources/documents/dnares/) was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 was blunt ends in high mollar excess. The ligated to the blunt ends in high mollar excess. The adaptored DNA was purified and size-selected for a 9.5 to adaptored DNA was preparative agarose gel 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pNDA2 (gi|4732114|gb|AF129072.1), a copy-number of pNDA2 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid(R1. The vector was ligated with adaptors complementary to the insert adaptors and with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180 a

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ś
The present invention relates to novel murine cDNAs produced using gene trap technology. The OMNIBANK gene trapped sequences (GTSs) are individually identified novel genes, and are useful in functional genomic analysis, in the discovery and development of new therapeutic and diagnostic agents, for gene discovery, for diagnostic gene expression analysis, for cross species hybridiaation analysis, and for genetic manipulations such as antisense inhibition or gene targeting.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes a novel p53-binding region of a human CD95 receptor DNA molecule. The p53-binding region, or a vector containing it, can be used to screen for apoptosis-modulating substances potentially useful for canner chemotherapy. This sequence represents a fragment of the human CD95 receptor intron 1 which contains a p53 binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 266 BP; 49 A; 72 C; 110 G; 35 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                region described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 2; Fig 4; 12pp; German.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel receptor DNA useful for identifying apoptosis-modulating substances potentially useful for cancer chemotherapy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2000-162245/15.

ABZ73698-ABZ74687 represent human secreted protein genomic fragments. The invention also encompasses antibodies specific for the secreted proteins the use of the secreted proteins in drug screening and recombinant vectors and host cells comprising a nucleic acid of the invention. The secreted proteins are thought to be involved in biological activities magnation, prohomone activation and neurotransmitter activity. The secreted proteins, nucleic acids encoding them, antibodies or antibody

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The polynucleotides of the invention are also useful for isolating cDNAs, genomic clones or full-length genes/polynucleotides, or their homologues, heterologues, paralogues or orthologues, that are capable of hybridising to one or more of the new murine polynucleotide sequences. The polynucleotides are also useful for identifying the coding regions of the murine genome, and as hybridisation probes. ABX90657-ABX91862 represent the murine GTSs of the invention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 fragments specific for the secreted proteins, and modulators of protein activity are useful for diagnosing or treating cancers or other and hyperproliferative disorders. Additionally, the secreted proteins and hyperproliferative disorders. Additionally, the secreted proteins and their nucleic acids may also be used in the treatment of autoimmune their nucleic acids may also be used in the treatment of autoimmune disorders, diseases involving angiogenesis, AIDS disorders inflammatory disorders, diseases involving angiogenesis, AIDS disorders, diseases involving and oppose wound healing. Nucleic acids of the invention may be used for chromosome wound healing. Nucleic acids of the invention may be used for chromosome mapping, in gene therapy, for identifying identification, chromosome mapping, in gene therapy, for identifying and individuals from minute biological samples, as hybridisation probes, and individuals from minute biological samples, as hybridisation probes, and individuals from minute biological samples, as hybridisation probes, and individuals from minute biological samples, as hybridisation probes, and individuals from minute biological samples, as hybridisation probes, and individuals from minute biological samples and individuals from minute biological samples to the properties of the secreted protein genomic fragment referred to in the disclosure of the spectrated protein genomic fragment referred to in the disclosure of the spectrated protein genomic fragment referred to in the disclosure of the spectrated protein genomic fragment referred to in the disclosure of the spectrated protein genomic fragment referred to in the disclosure of the spectrated protein genomic fragment referred to in the disclosure of the spectrated protein genomic fragment referred to in the disclosure of the spectrated protein generated protein genomic fragment referred to in the disclosure of the spectrated protein generated protein generated protein generated protein generated protein generated protein generated protein 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 8243 BP; 2717 A; 1618 C; 1711 G; 2197 T; 0 other;

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Disclosure; SEQ ID NO 35824; 3071pp + Sequence Listing; English.

CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC the nucleotides may be used to produce the secreted (I), by inserting CC protein. (I) proteins and polynucleotides may be used to produce the secreted (I), by inserting CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic CC expresent human immune/haematopoietic antigen genomic concers from the present invention. AAK4942 to AAK54950 and AAM82169 XXX

New human secreted proteins and nucleic acids, useful for detecting or treating cancer or other hyperproliferative disorders, autoimmune inflammatory disorders, HIV disease, hepatitis or anemia -

Disclosure; Page 2278-2281; 2474pp; English.

CC protein genes, and ABB00947-ABB01363 represent the proteins they encode.
CC ABZ73698-ABZ74687 represent human secreted proteins they encode.
CC invention also encompasses antibodies specific for the secreted proteins. The
CC vectors and host cells comprising a nucleic acid of the invention. The
CC secreted proteins are thought to be involved in biological activities
CC associated with cellular signalling, cellular signation, cellular differentiation, cell
CC secreted proteins, nucleic acids encoding them, antibodies or antibody
CC fragments specific for the secreted proteins, and neurotransmitter activity. The
CC fragments specific for the secreted proteins, and modulators of protein
CC fragments specific for the secreted proteins, and modulators of protein
CC fragments specific for the secreted proteins, and modulators of protein
CC fragments specific for the secreted proteins or other
CC their nucleic acids may also be used in the treatment of autoimmune
CC disorders, inflammatory disorders, diseases involving angiogenesis, AIDS
CC (acquired immunodeficiency syndrome), hepatitis, anaemia, and to promote
CC undividuals from minute biological samples, as hybridisation probes, and
CC as molecular weight markers. The present sequence represents a human
CC invention. ABZ73281-ABZ73697 represent cDNAs corresponding to 391 human secreted protein genes, and ABP00947-ABP01363 represent the proteins they encode.

Sequence 12710 BP; 4072 A; 2575 C; 2567 G; 3496 T; 0 other;

cc lactation or muscle and fat deposition (designated LMPD) derived cc from cattle, and the LMPD nucleic acid can specifically hybridise to a cc from cattle, and the LMPD nucleic acid can specifically hybridise to a cc second nucleic acid molecule comprising any of 5912 nucleotide cc also included are; (1) a transformed cell having a nucleic acid comprising an LMPD nucleic acid linked to a promoter and a 3 non-cc translated sequence that functions in the cell to cause termination of translated sequence that functions in the cell to cause termination of compressing an LMPD nucleic acid linked to a promoter and a 3 end cranscription and addition of polyademylated ribonucleotides to a 3 end cranscription and addition of polyademylated ribonucleotides to a 3 end cranscription and addition of polyademylated ribonucleotides to a 3 end cranscription and addition of polyademylated ribonucleotides to a 3 end cranscription and addition of polyademylated ribonucleotides to a 3 end cranscription and addition of polyademylated ribonucleotides to a 3 end cranscription of the molecule; and (2) determining a level or pattern of a nucleic acid (comprising any of the 5912 nucleic acid melecule complement or fragment) with a complement ary nucleic acid melecule the complement ary nucleic acid permits the complement ary nucleic acid melecule. The complement ary nucleic acid where the detection of the molecule. The LMPD nucleic acid is used for determining a level or pattern of the molecule. The LMPD nucleic acid is used for determining a level or pattern of the molecule. The present sequence is one of the 5912 bowline constructs for use in cattle gene expression, or for genetically constructs for use in cattle gene expression, or for genetically constructs for use in cattle gene expression, or for genetically constructs for use in cattle gene expression, or for genetically constructs for use in cattle gene expression with the specification but the construct of the molecule acids.

CC LMPD EST (expressed sequence was not shown in t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABX52814 standard; cDNA; 433 BP

                                The invention relates to a composition comprising a human GDP-mannose 4,6-dehydratase (GM4,6D) peptide. The peptide is useful for identifying CC 4,6-dehydratase (GM4,6D) peptide. The peptide is useful for identifying CC GM4,6D inhibitors are useful for reducing inflammation (CC GM4,6D inhibitors are useful for reducing inflammation of gladest and for treating or ameliorating diseases affected by the CC by the level of cellular fucosylation or diseases include arthritis. CC fucosylation of glycoconjugates These diseases include arthritis. CC infection. The GM4,6D peptide or a polymucleotide encoding it is also CC constitution. The GM4,6D peptide or a polymucleotide encoding it is also CC useful for manufacturing complex carbohydrates and as targets for CC useful for manufacturing complex carbohydrates and as targets in the CC screening small molecule antagonists of the activity of the enzyme. The CC screening small molecule antagonists of the activity defects in the CC screening small molecule arthrighy. Sequences polymucleotide is useful in developing an assay for defects in the CC screening and ABX17947-ABX3716 represent DNA molecules encoding CC ABX17942-ABX17944 and ABX17947-ABX3716 represent DNA molecules encoding CC Note: The sequence data for this patent did not form part of the printed CC specification but was obtained in electronic format directly from USPTO creaming the property of the complex contains the sequence data for this patent did not form part of the printed CC are served to the contained in electronic format directly from USPTO contained the contained in electronic format directly from USPTO contained the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 433 BP; 86 A; 88 C; 159 G; 100 T; 0 other;

                                                               AAZ11974 standard; DNA; 273 BP.
                                                                                                                                                                                                              The present invention relates to proteins from Neisseria gonorrhoeae. Also disclosed are the nucleic acid molecules encoding the proteins and antibodies that specifically bind to the proteins. The composition manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABZ37706-ABZ42016 represent nucleic acid molecules of the invention.
                                                                                                                                                                                                 Sequence 261 BP; 53 A; 71 C; 65 G; 72 T; 0 other;
                                                                                                                                                                                                                                                                                                                               New protein from Neisseria gonorrheae, useful for the manufacture of a medicament for treating or preventing N. gonorrheae infection

                                                                                                                                                                                                                                                                                                                                                   Nucleotide sequences AAZ11972-Z12358 represent open reading frames (ORFS) of Neisseria meningitidis and N. gonorrhoeae which encode antigenic proteins (see AAY38499-Y38944). The antigenic proteins, their nucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria infections, such as meningitis, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful
                                                                                                                                                                                                                                                                                                                      Sequence 273 BP; 75 A; 67 C; 83 G; 48 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    30-APR-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              02-SEP-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAZ53015 to AAZ54536, AAZ54577 to AAZ54615, and AAY74253 to AAY75941 represent novel Neisseria meningitis and N. genorrheae polymucleotides and polypeptides. AAZ54576 to AAZ54576 and AAZ54616 to AAZ5437 represent primers used in the exemplification of the present invention. The polypeptides, the polymucleotides, antibodies and compositions of polypeptides of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the immunogenic compositions for treating or preventing infection due to manufacture of medicaments for treating or preventing infection due to presence of Neisseria bacteria, or to raise antibodies. They may also presence of Neisseria bacteria, or antagonists, which may themselves be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       09-OCT-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                09-OCT-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAZ53015 to AAZ54536, AAZ54577 to AAZ54615, and AAY74253 to AAY75941 represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ54537 to AAZ54576 and AAZ54616 to AAZ55473 represent protes used in the exemplification of the present invention. The polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to manufacture of medicaments for treating or preventing infection due to manufacture of medicaments for treating or preventing infection due to presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves be used to screen for agonists or antagonists, which may themselves are use as antibacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            09-OCT-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAK58992;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAK58992 standard; cDNA; 409 BP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleotide sequences AAZ11972-Z12358 represent open reading frames (ORFS) of Neisseria meningitidis and N. gonorrhoeae which encode antigenic proteins (see AAY38499-Y38944). The antigenic proteins, their nucleic acids and antibodies are used for diagnosis, prevention (as vaccines) or treatment of Neisseria infections, such as meningitis, septicaemia and gonorrhea. Both organisms are closely related. Fragments of the nucleic acids are useful as hybridisation probes and antisense reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 381 BP; 106 A; 84 C; 114 G; 77 T; 0 other;

AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For treatment of the used to treat disorders, associated with decreased example, they may be used to treat disorders, associated with instant's genome that affect the activity of (I) by expressing inactive proteins or to that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) supplement the patients own production of (I). Additionally, (b) inserting polymucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the
                                                                                                                                                                                                                                                   Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and

                                                                                                                     AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC example, they may be used to treat disorders associated with decreased cc expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC protein. (I) proteins and polynucleotides may be used to produce the secreted (I), by inserting CC the nucleic acids into a host cell and culturing the cell to express the CC cancers and cancer metastases of haematopoietic-related diseases, especially to AAK67694 represent human immune/haematopoietic antigen genomic cc sequences from the present invention. AAK64962 to AAK64703 and AAM82169 cc represent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                                        망
                                                                                                                      Ś
                                                                                                                                                                                                                                                CC AMKS4951 to AMK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC treatment of diseases associated with inappropriate (I) expression. For CC expression by rectifying mutations or deletions in a patient's genome CC expression by rectifying mutations or deletions in a patient's genome CC supplement the patients own production of (I). Additionally, (I) the nucleic acids into a host cell and culturing the cell to express the CC polynucleorides may be used to produce the secreted (I), by inserting CC protein. (I) proteins and polynucleorides may be used to proven the cell to express the CC diagnose and treat immune/haematopoietic-derived cells. AAK64703 CC cancers and cancer metastases of haematopoietic antigen genomic CC sequences from the present invention. AAK34942 to AAK874950 and AAM82169 crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                             Query Match

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                               Score

```

Pred. No. is the number of results predicted  $\dot{p}y$  chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
